

Proceedings of the Institute of Radio Engineers Volume 9 (Paperback)

Filesize: 7.1 MB

Reviews

I just started off reading this article pdf. It is probably the most remarkable ebook we have go through. It is extremely difficult to leave it before concluding, once you begin to read the book. (Jeanette Kreiger)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1921 Excerpt: .in Radio Receiving Stations--Patented March 15, 1921. This invention relates to a wave filter for use in radio receiving systems for the purpose of reducing the effect of static or atmospheric disturbances. 1,371,567--Robert H. Marriott, of Bremerton, Washington. Radio Receiving System--Patented March 15, 1921. This invention relates to a receiving circuit designed to dissipate or neutralize undesirable disturbing currents. A plurality of receiving circuits are employed connected to a neutralizing circuit and a circuit which contains rectifiers acting as frequency changing devices. 1,371,757--Ernest Walter Brudenell Gill, of Oxford, England, Assignor to Radio Corporation of America, of New York, N. Y., a corporation of Delaware. Wireless-Telegraph Receiver--Patented March 15, 1921. This patent pertains to a circuit arrangement for vacuum tube receivers wherein the voltage of the first grid is adjusted so that the current in the plate circuit of the second tube may decrease as the voltage of the first grid increases and increase as the voltage of the first grid decreases. The plate current of the second tube varies inversely with the potential of the grid of the first tube thru a portion of a cycle. The purpose of this arrangement is to obtain a response of equal strength for all signals over a particular strength and to provide more marked discrimination between signals received from different types of transmitters such as Telefunken and British Navy spark sets. Voltage Number 1,371,757--Wireless-Telegraph Receiver 1,372,425--John Hays Hammond, Jr., of Gloucester, Mass. System of Radio Telegraphy and Telephony--Patented March 22,...
