Let the hypotenuse Ac, the base Ab, and the perpendicular Bc, be the parts under consideration, in the triangle ABC The complement of Ac is here the middle part, being separated from Ab by the angle A, and from Bc by the angle c; therefore Ab and Bc are the extremes disjunct. Hence, $\text{rad } x \cos Ac = \cos Ab \times \cos Bc$ Scholium. The preceding cases include all the varieties that can possibly happen in the practice of right-angled spherical triangles. Any of the equations may be turned into a proportion by putting the required term last, that with which it is connected first, and the other two in the middle of any order. These equations are exactly the same as those already given (384), and therefore Napier s rules are universally true.
