Reviews

This publication is fantastic. It can be rally intriguing throgh looking at time. You may like the way the author compose this publication.

(Mr. Wilber Thiel)

RULER COMPASSES

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 38 pages. Dimensions: 9.4in. x 7.2in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1916 edition. Excerpt: . . . as in fig. 25. Then $P LMP A P BCP D PBCP PM LP P LMP$, so that PP belong to the involution determined by the pairs LL, MM . This is a projective property, and is therefore true of the range cut out on a transversal by the sides of a quadrangle and any conic through the four vertices; hence all such conics cut the transversal in pairs of conjugate points of the same involution determined by the pairs of opposite sides. But these pairs of sides are themselves particular, degenerate cases of conics through the four points, so the theorem can be stated in the simple and general form: Conies through four fixed points cut any transversal in involution. Hence if five points $ABODE$ on a conic are given, the other point of intersection X of any straight line EX through one of the five points is determined as the conjugate of E in the involution cut out on EX by the sides of the quadrangle $ABCD$. It can therefore be constructed with ruler only. Thus we have a ruler construction for any number of points on the conic through five given points, for we can find its intersection with any number of straight lines through any of the given points. Thus with ruler only, and without calculation, we can plot the curve with as much accuracy as time, patience and other limitations permit, and this is the nearest approach to actually drawing...
